

RETAIL solutions

AT LAST.....

SOLAR FILM THAT LOOKS

CLEAR

Demanded by retailers for years, at last there's a solution to costly sun-damaged stock.

3M PRESTIGE 70 SOLAR WINDOW FILM looks **CLEAR**. That's right, clear.

You can now have it all: window display, stock protection, reduced glare & reduced energy consumption.

Prestige has all the benefits of tinted solar film such as UV filtration, fade reduction, glare reduction & heat rejection but it does not detract from the aesthetic appeal of glass, nor the products or store on display.

In the retail industry we are only too aware of the damaging effects of sun to stock; deterioration of light sensitive beverages and foods, fading of packaging, premature aging of fruit, spoiling of meat, poultry & dairy, fading of non-perishable stock & furnishings. Sun damage is costly.

Prestige solution:

- **It won't detract or deter from window displays**
- **Installation is quick**, unobtrusive, clean, silent & does not pose any threat to customer or employee safety
- **UV rays are reduced by 99.99%** reducing damage to stock
- Reflectivity is equal to or less than standard glass (there is **no mirror effect**)
- Manufacturing standards are recognised by the USA's '**Energy Star**' scheme.
- **97%** of the sun's **infrared heat** is **rejected** reducing power consumption & improving the temperature balance between sunny & shady sides of the building
- Prestige is endorsed by the **US Skin Cancer Foundation**
- **Glare** is reduced improving shopper & staff comfort with the added benefit of minimising computer monitor reflections
- Optional '**security-strength**' offers retailers a protective shield from potential intruders

The solution is Prestige **CLEAR**
